

Define and Differentiate PHP, ASP, NET, JSP, and CFML

DEFINE				
PHP	ASP	NET	JSP	CFML
• Hypertext preprocessor - scripting language.	• Active Server pages - dynamic web page creation technology.	• A trademark for a widely used scripting language designed for producing dynamic webpages.	• Java Server Pages - Designing Technology	• ColdFusion Markup Language - scripting language.

Differentiate

Availability. The open-source tools are PHP and JSP; ASP - a commercial one, and CFML - available as commercial, as well as free versions.	MySQL maintenance. PHP and the last CFML version - native; ASP and JSP - the third-party driver is required.	Integration with HTML. It takes place with no trouble for PHP and CFML, for ASP and JSP - a rather complex process.	Web hosting. Almost all servers support PHP. The dedicated server is necessary for CFML and ASP. And JSP is fairly maintained by the servers.
